

Structured Cabling, Evolution & Relocation I

Inglenorth (Contracting) Limited www.inglenorth.co.uk

The Problem

Inglenorth Limited are an established bulk haulage and demolition company based in Standish, Wigan. The business needed to relocate and so did their IT and communication systems.

Inglenorth required:

- a modern, future-proof network.
- an advanced, scalable phone system.
- up-to-date, faster computer terminals.
- an all-in-one, tidy, safe and bespoke cabinet.
- an easy transition from their old premises.

Our Solution

Cat6 Network, VOIP System & Dell Systems

In order to fulfil the company's requirements, RatwareUK installed an ultra-fast category 6 network branching from their new communications cabinet.

Network modules were punched in, giving each desk several communication options to either voice or data.

Each desk was then supplied with a high specification Dell Vostro system, complete with wide screen 21" displays.

The new Dell terminals were quickly joined to the server and the company's software rapidly deployed.

Inglenorth's server and core communications components were then transferred and implemented at the new premises with minimal downtime.

The company now enjoys the full benefits of a renewed IT system, contract support and high-

tech Avaya VOIP phone system with a bespoke auto-attendant.

Inglenorth have settled into their new offices. Their IT system is secure in one cabinet and the new phone system has dramatically improved staff productivity.
